### Summary

Junior Automation Developer with a **B.Sc.**, currently working on developing and testing automation tools. Experienced with **Python**, **Java**, **SQL**, **Selenium**, and **Postman**, and familiar with testing frameworks and development environments. Passionate about improving software quality through reliable and scalable test automation. Always exploring new ways to build efficient tools and contribute to development.

### Experience

#### **Dell | Software Developer – Automation Team (Internship) | 2024**

- Built a **test management framework** as part of a four-member automation team. Used **NodeJS**, **ReactJS**, **MongoDB**, and **ExpressJS** to design system components.
- Integrated **REST APIs** and tested endpoints using **Postman**. Developed features for managing **QA tests**, tracking resources, and generating reports. Collaborated on adding **AI-based analysis** for test results to improve reporting quality.

### Education

#### **B.Sc – Information Systems Bachelor of Science at Emek Yezreel College | 2021–2024**

- Completed hands-on coursework in **Java** (Eclipse, VS Code) and **Python** (PyCharm). Studied **Algorithms**, **Data Structures**, and **Operating Systems** (Linux and Windows).
- Practiced software development principles in multiple team-based academic projects.

### Project

#### **Software Quality Assurance Project**

- Completed a practical **SQA course** focused on **black-box** and **white-box testing**. Gained experience with **JUnit** and **Selenium** for **test automation**.
- Created full test documentation including **STP**, **STD**, and **STR**. Automated test cases to verify software performance and reliability.
